

Overview

The PCCtest 457 switchable configuration header is an accessory item for the PCCtest 450 CardBus socket tester. Prior to the introduction of the PCCtest 457, the user of the PCCtest 450 would manually insert and remove the PC Card-16 and CardBus configuration headers depending on the test. In a production environment, this constant insertion and removal action would eventually wear out the PCCtest's 15-pin I/O connector. The PCCtest 457 eliminates the wear out problem by using a simple slide switch to select between PC Card-16 or CardBus modes.

The PCCtest 457 switchable configuration header is available separately or can be ordered with the PCCtest 450 instead of the separate CardBus/PC Card-16 configuration headers.

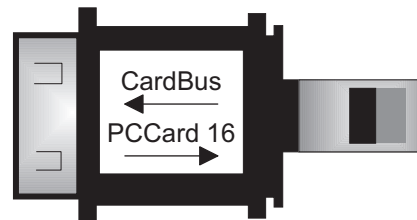

Mechanical Specifications

Length: 1.5"

Width: 0.7"

Thickness: 0.4"

Weight: 0.2 oz

Ordering Information

- Use Model No. PCCtest 457 to order individual PCCtest 457 headers
- Use Model No. PCCtest 450 OPT-01 to order PCCtest 450 with PCCtest 457
- Now Available
